

Disaster Fire Safety

Earthquake

A wide range of natural disasters occurs within the United States every year. Natural disasters can have a devastating effect on you and your home. Hamilton Fire District #3 encourages you to use the following safety tips to help protect yourself, your family and your home from the potential threat of fire during or after an earthquake. You can greatly reduce your chances of becoming a fire casualty by being able to identify potential hazards and following the outlined safety tips.

SOME TYPES OF FIRE RELATED HAZARDS PRESENT DURING AND AFTER AN EARTHQUAKE

- Appliances, furniture, and household products can shift, fall, and spill.
- Gas, chemical and electrical hazards may be present.
- Leaking gas lines, damaged or leaking gas propane containers, and leaking vehicle gas tanks could explode or ignite.
- Pools of water or even appliances can be electrically charged.

CHEMICAL SAFETY

- Look for flammable liquids like gasoline, lighter fluid, and paint thinner that may have spilled.
- Thoroughly clean the spill and place containers in a well-ventilated area.
- Keep combustible liquids away from heat sources.

ELECTRICAL SAFETY

- If you can safely get to the main breaker or fuse box, turn off the power.
- Look for items that might have jarred loose during the earthquake.
- Appliances or power connectors could create a fire hazard.
- Assume all wires on the ground are electrically charged. This includes cable TV feeds.
- Look for and replace frayed or cracked extension and appliance cords, loose prongs, and plugs.
- Exposed outlets and wiring could present a fire and life safety hazard.
- Appliances that emit smoke or sparks should be repaired or replaced.
- Have a licensed electrician check your home for damage.

GAS SAFETY

- Smell and listen for leaky gas connections. If you believe there is a gas leak, immediately leave the house and leave the door(s) open.
- Never strike a match. Any size flame can spark an explosion.
- Before turning the gas back on, have the gas system checked by a professional.

GENERATOR SAFETY

- Follow the manufacturer's instructions and guidelines when using generators.
- Use a generator or other fuel-powered machines outside the home. CO fumes are odorless and can quickly overwhelm you indoors.
- Use the appropriate sized and type power cords to carry the electric load. Overloaded cords can overheat and cause fires.
- Never run cords under rugs or carpets where heat might build up or damage to a cord may go unnoticed.
- Never connect generators to another power source such as power lines. The reverse flow of electricity or 'backfeed' can electrocute an unsuspecting utility worker.

HEATING SAFETY

- Kerosene heaters may not be legal in your area and should only be used where approved by authorities.
- Do not use the kitchen oven range to heat your home. In addition to being a fire hazard, it can be a source of toxic fumes.
- Alternative heaters need their space. Keep anything combustible at least 3 feet away.
- Make sure your alternative heaters have 'tip switches.' These 'tip switches' are designed to automatically turn off the heater in the event they tip over.
- Only use the type of fuel recommended by the manufacturer and follow suggested guidelines.
- Never refill a space heater while it is operating or still hot.
- Refuel heaters only outdoors.
- Make sure wood stoves are properly installed, and at least 3 feet away from combustible materials. Ensure they have the proper floor support and adequate ventilation.
- Use a glass or metal screen in front of your fireplace to prevent sparks from igniting nearby carpets, furniture or other combustible items.

AND REMEMBER...

- Be careful when using candles. Keep the flame away from combustible objects and out of the reach of children.
- Some smoke alarms may be dependent on your home's electrical service and could be inoperative during a power outage. Check to see if your smoke alarm uses a back-up battery and install a new battery at least once a year.
- Smoke alarms should be installed on every level of your home.
- All smoke alarms should be tested monthly. All batteries should be replaced with new ones at least once a year.
- If there is a fire hydrant near your home, keep it clear of debris for easy access by the fire department.

FLOODS

A wide range of natural disasters occurs within the United States every year. Natural disasters can have a devastating effect on you and your home. Hamilton Fire District #3 encourages you to use the following safety tips to help protect yourself, your family and your home from the potential threat of fire during or after a flood. You can greatly reduce your chances of becoming a fire casualty by being able to identify potential hazards and following the outlined safety tips.

TYPES OF FIRE RELATED HAZARDS PRESENT DURING AND AFTER A FLOOD

- Generators are often used during power outages. Unless generators are properly used and maintained, they can be very hazardous.
- Alternative heating devices used incorrectly create fire hazards. Proper use and maintenance can decrease the possibility of a fire.
- Leaking above ground gas lines, damaged or leaking gas or propane containers, and leaking vehicle gas tanks may explode or ignite.
- Pools of water and even appliances can be electrically charged. This can result in a dangerous electrical fire.
- Appliances that have been exposed to water can short and become a fire hazard.

CHEMICAL SAFETY

- Look for combustible liquids like gasoline, lighter fluid, and paint thinner that may have spilled. Thoroughly clean the spill and place

containers in a well-ventilated area.

- Keep combustible liquids away from heat sources.

ELECTRICAL SAFETY

- If your home has sustained flood or water damage, and you can safely get to the main breaker or fuse box, turn off the power.
- Assume all wires on the ground are electrically charged. This includes cable TV feeds.
- Be aware of and avoid downed utility lines. Report downed or damaged power lines to the utility company or emergency services.
- Remove standing water, wet carpets and furnishings. Air dry your home with good ventilation before restoring power.
- Have a licensed electrician check your home for damage.

GENERATOR SAFETY

- Follow the manufacturer's instructions and guidelines when using generators.
- Use a generator or other fuel-powered machines outside the home. CO fumes are odorless and can quickly overwhelm you indoors.
- Use the appropriate sized and type power cords to carry the electric load. Overloaded cords can overheat and cause fires.
- Never run cords under rugs or carpets where heat might build up or damage to a cord may go unnoticed.
- Always refuel generators outdoors.
- Never connect generators to another power source such as power lines. The reverse flow of electricity or 'backfeed' can electrocute an unsuspecting utility worker.

HEATING SAFETY

- Kerosene heaters may not be legal in your area and should only be used where approved by authorities.
- Do not use the kitchen oven range to heat your home. In addition to being a fire hazard, it can be a source of toxic fumes.
- Alternative heaters need their space. Keep anything combustible at least 3 feet away.
- Make sure your alternative heaters have 'tip switches.' These 'tip switches' are designed to automatically turn off the heater in the event they tip over.
- Only use the type of fuel recommended by the manufacturer and follow suggested guidelines.
- Never refill a space heater while it is operating or still hot.

- Refuel heaters only outdoors.
- Make sure wood stoves are properly installed, and at least 3 feet away from combustible materials. Ensure they have the proper floor support and adequate ventilation.
- Use a glass or metal screen in front of your fireplace to prevent sparks from igniting nearby carpets, furniture or other combustible items.

AND REMEMBER...

- Do not use alternative heating devices to dry clothes or furnishings.
- Be careful when using candles. Keep the flame away from combustible objects and out of the reach of children.
- Never thaw frozen pipes with a blow torch or other open flame. Use hot water or a UL listed device such as a hand held dryer.
- Some smoke alarms may be dependent on your home's electrical service and could be inoperative during a power outage. Check to see if your smoke alarm uses a back-up battery and install a new battery at least once a year.
- Smoke alarms should be installed on every level of your home.
- All smoke alarms should be tested monthly. All batteries should be replaced with new ones at least once a year.
- If there is a fire hydrant near your home, keep it clear of debris for easy access by the fire department.

SUMMER STORMS

A wide range of natural disasters occurs within the United States every year. Natural disasters can have a devastating effect on you and your home. Hamilton Fire District #3 encourages you to use the following safety tips to help protect yourself, your family and your home from the potential threat of fire during or after a summer storm. You can greatly reduce your chances of becoming a fire casualty by being able to identify potential hazards and following the outlined safety tips.

SOME TYPES OF FIRE RELATED HAZARDS PRESENT DURING AND AFTER A SUMMER STORM

- Lightning associated with thunderstorms generates a variety of fire hazards. The power of lightning's electrical charge and intense heat can electrocute on contact, splitting trees and causing fires.
- Pools of water and even appliances can be electrically charged.
- Appliances that have been exposed to water can short and become a fire hazard.

- Generators are often used during power outages. Generators that are not properly used and maintained can be very hazardous.

CHEMICAL SAFETY

- Look for combustible liquids like gasoline, lighter fluid, and paint thinner that may have spilled. Thoroughly clean the spill and place containers in a well-ventilated area.
- Keep combustible liquids away from heat sources.

ELECTRICAL SAFETY

- If your home has sustained flood or water damage, and you can safely get to the main breaker or fuse box, turn off the power.
- Assume all wires on the ground are electrically charged. This includes cable TV feeds.
- Be aware of and avoid downed utility lines. Report downed or damaged power lines to the utility company or emergency services.
- Remove standing water, wet carpets and furnishings. Air dry your home with good ventilation before restoring power.
- Have a licensed electrician check your home for damage.

GAS SAFETY

- Smell and listen for leaky gas connections. If you believe there is a gas leak, immediately leave the house and leave the door(s) open.
- Never strike a match. Any size flame can spark an explosion.
- Before turning the gas back on, have the gas system checked by a professional.

GENERATOR SAFETY

- Follow the manufacturer's instructions and guidelines when using generators.
- Use a generator or other fuel-powered machines outside the home. CO fumes are odorless and can quickly overwhelm you indoors.
- Use the appropriate sized and type power cords to carry the electric load. Overloaded cords can overheat and cause fires.
- Never run cords under rugs or carpets where heat might build up or damage to a cord may go unnoticed.
- Never connect generators to another power source such as power lines. The reverse flow of electricity or 'backfeed' can electrocute an unsuspecting utility worker.

HEATING SAFETY

- Kerosene heaters may not be legal in your area and should only be used where approved by authorities.
- Do not use the kitchen oven range to heat your home. In addition to being a fire hazard, it can be a source of toxic fumes.
- Alternative heaters need their space. Keep anything combustible at least 3 feet away.
- Make sure your alternative heaters have 'tip switches.' These 'tip switches' are designed to automatically turn off the heater in the event they tip over.
- Only use the type of fuel recommended by the manufacturer and follow suggested guidelines.
- Never refill a space heater while it is operating or still hot.
- Refuel heaters only outdoors.
- Make sure wood stoves are properly installed, and at least 3 feet away from combustible materials. Ensure they have the proper floor support and adequate ventilation.
- Use a glass or metal screen in front of your fireplace to prevent sparks from igniting nearby carpets, furniture or other combustible items.

AND REMEMBER...

- Be careful when using candles. Keep the flame away from combustible objects and out of the reach of children.
- Some smoke alarms may be dependent on your home's electrical service and could be inoperative during a power outage. Check to see if your smoke alarm uses a back-up battery and install a new battery at least once a year.
- Smoke alarms should be installed on every level of your home.
- All smoke alarms should be tested monthly. All batteries should be replaced with new ones at least once a year.
- If there is a fire hydrant near your home, keep it clear of debris for easy access by the fire department.

TORNADO OR HURRICANE

A wide range of natural disasters occurs within the United States every year. Natural disasters can have a devastating effect on you and your home. Hamilton Fire District #3 encourages you to use the following safety tips to help protect yourself, your family and your home from the potential threat of fire during or after a tornado or hurricane. You

can greatly reduce your chances of becoming a fire casualty by being able to identify potential hazards and following the outlined safety tips.

SOME TYPES OF FIRE RELATED HAZARDS PRESENT DURING AND AFTER A TORNADO OR HURRICANE

- Leaking gas lines, damaged or leaking gas propane containers, and leaking vehicle gas tanks may explode or ignite.
- Debris can easily ignite, especially if electrical wires are severed.
- Pools of water and even appliances can be electrically charged.
- Generators are often used during power outages. Generators that are not properly used and maintained can be very hazardous.
- Alternative heating devices used incorrectly create fire hazards. Proper use and maintenance can decrease the possibility of a fire.
- Appliances that emit smoke or sparks should be repaired or replaced.

CHEMICAL SAFETY

- Look for combustible liquids like gasoline, lighter fluid, and paint thinner that may have spilled. Thoroughly clean the spill and place containers in a well-ventilated area.
- Keep combustible liquids away from heat sources.

ELECTRICAL SAFETY

- Assume all wires on the ground are electrically charged. This includes cable TV feeds.
- Look for and replace frayed or cracked extension and appliance cords, loose prongs, and plugs.
- Exposed outlets and wiring could present a fire and life safety hazard.
- Appliances that emit smoke or sparks should be repaired or replaced.
- Have a licensed electrician check your home for damage.

GAS SAFETY

- Smell and listen for leaky gas connections. If you believe there is a gas leak, immediately leave the house and leave the door(s) open.
- Never strike a match. Any size flame can spark an explosion.
- Before turning the gas back on, have the gas system checked by a professional.

GENERATOR SAFETY

- Follow the manufacturer's instructions and guidelines when using generators.
- Use a generator or other fuel-powered machines outside the home. CO fumes are odorless and can quickly overwhelm you indoors.
- Use the appropriate sized and type power cords to carry the electric load. Overloaded cords can overheat and cause fires.
- Never run cords under rugs or carpets where heat might build up or damage to a cord may go unnoticed.
- Never connect generators to another power source such as power lines. The reverse flow of electricity or 'backfeed' can electrocute an unsuspecting utility worker.

HEATING SAFETY

- Do not use the kitchen oven range to heat your home. In addition to being a fire hazard, it can be a source of toxic fumes.
- Alternative heaters need their space. Keep anything combustible at least 3 feet away.
- Make sure your alternative heaters have 'tip switches.' These 'tip switches' are designed to automatically turn off the heater in the event they tip over.
- Only use the type of fuel recommended by the manufacturer and follow suggested guidelines.
- Never refill a space heater while it is operating or still hot.
- Refuel heaters only outdoors.
- Make sure wood stoves are properly installed, and at least 3 feet away from combustible materials. Ensure they have the proper floor support and adequate ventilation.
- Use a glass or metal screen in front of your fireplace to prevent sparks from igniting nearby carpets, furniture or other combustible items.

AND REMEMBER...

- Be careful when using candles. Keep the flame away from combustible objects and out of the reach of children.
- Some smoke alarms may be dependent on your home's electrical service and could be inoperative during a power outage. Check to see if your smoke alarm uses a back-up battery and install a new battery at least once a year.
- Smoke alarms should be installed on every level of your home.
- All smoke alarms should be tested monthly. All batteries should be replaced with new ones at least once a year.
- If there is a fire hydrant near your home, keep it clear of debris for

easy access by the fire department.

WINTER STORM

A wide range of natural disasters occurs within the United States every year. Natural disasters can have a devastating effect on you and your home. Hamilton Fire District #3 encourages you to use the following safety tips to help protect yourself, your family and your home from the potential threat of fire during or after a winter storm. You can greatly reduce your chances of becoming a fire casualty by being able to identify potential hazards and following the outlined safety tips.

SOME TYPES OF FIRE RELATED HAZARDS PRESENT DURING AND AFTER A WINTER STORM

- Alternative heating devices used incorrectly create fire hazards.
- Damaged or downed utility lines can present a fire and life safety hazard.
- Water damaged appliances and utilities can be electrically charged.
- Frozen water pipes can burst and cause safety hazards.
- Leaking gas lines, damaged or leaking gas propane containers, and leaking vehicle gas tanks may explode or ignite.
- Generators are often used during power outages. Generators that are not properly used and maintained can be very hazardous.

CHEMICAL SAFETY

- Look for combustible liquids like gasoline, lighter fluid, and paint thinner that may have spilled. Thoroughly clean the spill and place containers in a well-ventilated area.
- Keep combustible liquids away from heat sources.

ELECTRICAL SAFETY

- If your home has sustained flood or water damage, and you can safely get to the main breaker or fuse box, turn off the power.
- Assume all wires on the ground are electrically charged. This includes cable TV feeds.
- Look for and replace frayed or cracked extension and appliance cords, loose prongs, and plugs.
- Exposed outlets and wiring could present a fire and life safety hazard.
- Appliances that emit smoke or sparks should be repaired or replaced.

- Have a licensed electrician check your home for damage.

GAS SAFETY

- Smell and listen for leaky gas connections. If you believe there is a gas leak, immediately leave the house and leave the door(s) open.
- Never strike a match. Any size flame can spark an explosion.
- Before turning the gas back on, have the gas system checked by a professional.

GENERATOR SAFETY

- Follow the manufacturer's instructions and guidelines when using generators.
- Use a generator or other fuel-powered machines outside the home. CO fumes are odorless and can quickly overwhelm you indoors.
- Use the appropriate sized and type power cords to carry the electric load. Overloaded cords can overheat and cause fires.
- Never run cords under rugs or carpets where heat might build up or damage to a cord may go unnoticed.
- Never connect generators to another power source such as power lines. The reverse flow of electricity or 'backfeed' can electrocute an unsuspecting utility worker.

HEATING SAFETY

- Kerosene heaters may not be legal in your area and should only be used where approved by authorities.
- Do not use the kitchen oven range to heat your home. In addition to being a fire hazard, it can be a source of toxic fumes.
- Alternative heaters need their space. Keep anything combustible at least 3 feet away.
- Make sure your alternative heaters have 'tip switches.' These 'tip switches' are designed to automatically turn off the heater in the event they tip over.
- Only use the type of fuel recommended by the manufacturer and follow suggested guidelines.
- Never refill a space heater while it is operating or still hot.
- Refuel heaters only outdoors.
- Make sure wood stoves are properly installed, and at least 3 feet away from combustible materials. Ensure they have the proper floor support and adequate ventilation.
- Use a glass or metal screen in front of your fireplace to prevent sparks from igniting nearby carpets, furniture or other combustible

items.

AND REMEMBER...

- Be careful when using candles. Keep the flame away from combustible objects and out of the reach of children.
- Some smoke alarms may be dependent on your home's electrical service and could be inoperative during a power outage. Check to see if your smoke alarm uses a back-up battery and install a new battery at least once a year.
- Smoke alarms should be installed on every level of your home.
